Curriculum Map – Geography – Year 13

	Term 1		Term 2		Term 3	
Key focus	Continue Contemporary urban environments	NEA	Water and carbon cycles	Global systems and global governance	Water and Carbon ongoing	Global systems and global governance ongoing
Purpose of the scheme	This topic focuses on urban growth and change which are seemingly ubiquitous processes and present significant environmental and social challenges for human populations. The section examines these processes and challenges and the issues associated with them, in particular the potential for environmental sustainability and social cohesion. Engaging with these themes in a range of urban settings from contrasting areas of the world affords the opportunity for students to appreciate human diversity and develop awareness and insight into profound questions of opportunity, equity and sustainability.	All students are required to undertake fieldwork in relation to processes in both physical and human geography.	This topic focuses on the major stores of water and carbon at or near the Earth's surface and the dynamic cyclical relationships associated with them. These are major elements in the natural environment and understanding them is fundamental to many aspects of physical geography.	This topic focuses on globalisation – the economic, political and social changes associated with technological and other driving forces which have been a key feature of global economy and society in recent decades.		
Pre read (suggested)	SUDs, Pollution reducing policies Bradford (Clean air zone) and Telegraph & Argus	BBC news and Telegraph & Argus	Climate Change BBC	Financial Times and BBC news		
Key knowledge and skills	Students will learn; Urbanisation, Urban forms, Social and economic issues associated with urbanisation, Urban climate, Urban drainage, Urban waste and its disposal, Other contemporary urban environmental issues and	Students are required to undertake an independent investigation. This must incorporate a significant element of fieldwork. The fieldwork undertaken as part of the individual investigation may be based on either human or physical aspects of	Students will learn; Water and carbon cycles as natural systems, The water cycle The carbon cycle, Water, carbon, climate and life on Earth	Students will learn; Globalisation, Global systems, International trade and access to markets, Global governance, The 'global commons', Antarctica as a global common and Globalisation critique.
